2.2 Discuss BMW & Hotslar case studies using AWS BMW Case Study using AWS conview: BMW usons ANIS for building its connected car platform, which provides services like navigation, rempte sovices, driving assistance to million of vehick. Als enabled BMW to scale their services globally while ensuring low latency & secure data transmission key AWS services Used = 1) Amazon S3 (Simple Storage Sovice) - For storing large data of vehicles like sensors information of event logs 2) Amazon Ecz (Elostic Compute Cloud) - To powar the back and systems systems that process data from connected vehicles. 3) AWS Lambela - Par savaless computing to run code in response to events such as vehicle data processing, without managing server 4) Amozon ROS (Relational Ocitabore Service) - For monoging structured wehrele data securely & reliably 5) AINS to Core - Fox handling the communication between vehicles of the cloud in real-time. * Impact:) Scalability - It allowed BMW to quickly scale as they added more refices & sources globally 2) Security - RMW leveraged AWS's Screenity features like encryption to ensure that vehicles data remained secure. 3) Innovation - AMW was able to use AWS to depotage innovative services Such as over the air updates of real-time vehicles monitoring improving
